

# Part 1

## What is Linux ?

### Think of Linux as :

- A **file-centric** Operating System
- Everything is a **File or a process**
- You control it by **commands** chained together like LEGO blocks.
- **Golden Rule :**
  - Linux rewards people who thinks in small tools combined together.
- It is known for it's stability, security, and flexibility, forming the foundation of countless operating systems called **Linux Distributions** like Ubuntu, Fedora or arch Linux.
